Community Corrections Facility (CCF)  
Recidivism Factsheet  
June 2015

CCF PROFILE
- Twelve Community Corrections Facilities (CCFs)
- Established throughout the State of Ohio through the RECLAIM initiative
- Provide a dispositional alternative to Juvenile and Family Court Judges when committing youth adjudicated of a felony offense

KEY FINDINGS

One-Year Recidivism
Of 496 youth releases from a CCF during 2013, 19.8% were admitted to DYS or DRC within one year of their release date. This broke down into 16.9% to DYS and 2.8% to DRC.

Two-Year Recidivism
The two-year rate of recidivism for the 666 youth releases during 2012 was 20.6%. This is a rate that is lower than in other years, and is in part due to a large number of short-term stays during 2012. There were 125 releases where the youth stayed less than two weeks in a CCF. If these releases are factored out, the two-year recidivism rate becomes 23.7%.

Three-Year Recidivism
Of the 534 youth released during 2011, 33.1% were admitted to DYS or DRC within three years of their release from a CCF. During the third year after release, only one additional youth was admitted to DYS, while an additional 30 were admitted to DRC. At the end of three years, the 33.1% broke down into 20.4% to DYS and 12.7% to DRC.

RECIDIVISM DEFINED
The percentage of youth who are admitted to the Ohio Department of Youth Services (DYS) or incarcerated in the Ohio Department of Rehabilitation and Correction (DRC) within one, two, and three years of release from a Community Corrections Facility.

PERCENTAGES OF CCF YOUTH ADMITTED TO DYS OR DRC BY YEAR OF RELEASE

![Graph showing percentages of youth admitted to DYS or DRC by year of release.]

1 year: 19.7%, 27.3%, 33.1%
2 year: 20.6%, 12.6%, 19.8%
